

## Data Recovery Services

Depending on the state of your current hard drive this will determine the complexity of the data recovery and the cost. I have been recovering data for over a decade and have a collection of hardware and software tools to give you the best possible outcome with your data. All data is recovered to redundant secure storage systems until your data is delivered to you. Your data is then purged from our storage completely for your security.

The following Recovery Levels all include the recovery of the following folders: Desktop, Favorites and the My Documents folders for all Windows profiles. For most people this is 100% of their files. If there are any additional folders you want recovered you will need to request it before the recovery process. Recovered data will be delivered on DVD or customer supplied hard drive. You will be notified before I start recovery which level will be required to obtain your data files.

### Level I Data Recovery      \$150

The backup and recovery of data from a hard drive which has a damaged Operating System or will not boot up due to blue screens, error messages or virus and spyware infections. Chance of recovery 100%

### Level II Data      \$275

Recovery of Data from a failing hard drive with bad sector's, whining and grinding noises. This drive will not allow system to startup and sometimes will not show up in Windows at all if it is a secondary hard drive. Chance of recovery 90%

### Level III Data Recovery      \$750

Recovery of Data from a hard drive which will not turn on or initialize. Hard Drive platters will be transplanted to another exact model hard drive and all recovery methods used to recovery your valuable information. Chance of recovery 50%

### Level IV Data Recovery      \$1500-3000

Drive will be shipped out to the industry leader in data recovery. This option is only for mission critical data that must be retrieved and all previous methods have failed. Chance of recovery 50%
